areas.**

Diagnosis

Initial consultation and investigation to gather information necessary to provide accurate and practical recommendations for candidate roof areas (sections) for coatings and/or restoration coatings. Our diagnosis process covers the analysis of the complete envelope of your facility.

Post-Repair Coatings

Repairs and spot replacements are opportune times to apply restoration coatings around projections, perimeter edges, and internal roof drains while technicians are on site.

Restoration Coatings

Restoration coatings applied to roof systems provide longevity to the existing roof system membrane and save money as an alternative to complete roof replacement.
